The advantages of **Quatrefolic®** (5-METHYLTETRAHYDROFOLATE GLUCOSAMINE SALT):

- 1) It is already in its active form 5-methyl tetrahydrofolate in salt glucosamine form.
- 2) Overcome the problem of folic acid or folate (introduced with food) which need the enzyme DHF, THF and above all of the MTHFR (methyltetrahydrofolate reductase) in order to be converted into the active form. Genetic defects concerning MTHF are more and more frequent with consequent risks of low absorption of folic acid in its active form.
- 3) It crosses the gastric barrier, where it is absorbed into intestinal environment.

DOSAGE

We recommend to take 1 tablet per day. Not exceed the dose recommended daily. Duration at least 2 months without interruptions.

NATURALLY LACTOSE FREE
GLUTEN FREE (GLUTEN LESS THAN 20 PPM)
