

Altial Eye drops

Altial is a sterile, multi-dose tear substitute with pre-dosed drops that can be used for corneal protection.

It can be used with great benefits by contact lens wearers and to wet and lubricate the eye surface.

The product contains hyaluronic acid high MW (1,6 mln Dalton), which thanks to its mucoadhesive and viscoelastic characteristics, remains on the ocular surface and gives high hydration. It favors the re-epithelialization for the interaction with the CD-44 receptors.

DOSAGE

Recommended daily dose: at least 2-3 daily doses are recommended
Recommended frequency of use: according to medical prescription

MEDICAL DEVICE

CLASS II B
