

# Liposkin DS

Liposkin DS is a cream indicated as a cosmetic helping the treatment of seborrheic dermatitis. With ingredients such as nicotinamide and zinc gluconate, it performs a sebum-normalizing action and soothes the skin. Lithium Gluconate normalises the skin's microflora. Liposkin DS also reduces any greasy and shiny appearance of the face.

Zinc Gluconate has antibacterial, cicatrizing, antioxidant, anti-inflammatory, sebum-fluidifying and protective properties against P. acnes resistant to erythromycin and is important in assisting the regeneration of skin tissues.

Lithium gluconate is a potent topical antifungal with high levels of efficacy probably due to its anti-inflammatory properties on keratinocytes. Nicotinamide counteracts the production of pro-inflammatory cytokines and leukocyte chemotaxis.

Enables restoration of the skin barrier function. In synergy with Zinc, enhances its adjuvant anti-inflammatory properties.

## DOSAGE AND INSTRUCTIONS FOR USE

Apply to the affected area with a light massage, after cleansing.
