

Refluxaid Nipio

Antireflux syrup for infants and children up to 3 age. It is intended to be used in order to limit symptoms related to gastroesophageal reflux disease and to esophagitis. The use of the product limits the burning sensation (heartburn), regurgitation, difficulty swallowing (dysphagia), painful swallowing (odynophagia), cough, hoarseness.

Our anti-reflux line comes from the synergy of high viscosity Magnesium Alginate with Plant Extract and acts as a protective and lasting barrier inside the stomach protecting the esophagus from burning and acidity caused by reflux. Alginates are polysaccharides extracted and purified from marine algae. Alginate block reflux mechanically: when it reaches the stomach, it precipitates and forms a floating gel that acts as an anti-reflux barrier.

INSTRUCTION FOR USE

Shake before use.

Administer according to the following dosage or according to medical opinion:

- Infants (up to 5 kg) 1 ml of product, 5-10 minutes after feeding. In case of regurgitation after administration, administer additional 1 ml.
- Up to 3 years of age (6-15 kg) 4 ml after meals and at bedtime.
