

# ThermAir Vials

Medical device based on salsobromiodic thermal water and hyaluronic acid; an adjuvant in the treatment of rhinitis and inflammatory diseases of the upper respiratory tract.

Therm Air is a medical device dispensed in solution for aerosol treatment, nasal showers and nasal washes, intended for adults (5 ml vials) and children (2 ml vials). Its natural formulation is designed to protect the respiratory tract and facilitate the physiological removal of nasal secretions.

The salsobromiodic thermal water helps regulate secretions and the serous component of the mucus, stimulating trophism in the mucous membranes and reducing local edema.

Hyaluronic acid promotes the repair and regeneration of the mucosa, forming a film with a shielding, moisturizing effect.

The formula contains glyceric extract of Chamomile, a pleasant-smelling humectant, and a sweetener to enhance the taste for pediatric use.

## INSTRUCTIONS FOR USE

Use 1-2 vial before use

The product can be:

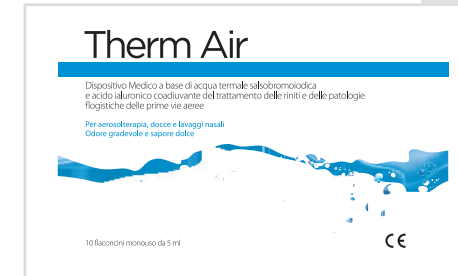

- sprayed from an aerosol, either as it is or in a basic solution, by following the instructions for use found on the aerosol device;
  - used for nasal washes by instilling the contents directly into the nostrils, or through a nasal shower.
- A gentle preventive cleansing of the nasal cavities is recommended before using the product.
